

Enhancing Airport Security

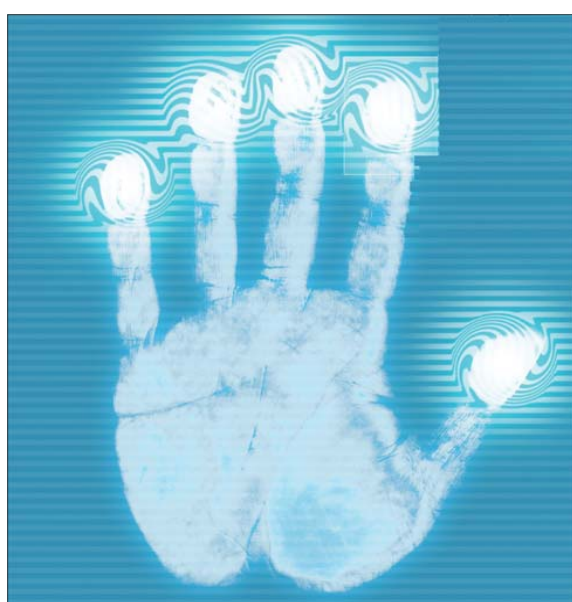

Behavioral recognition (hostile intent)

Employee training (suspicious behavior, incentives)

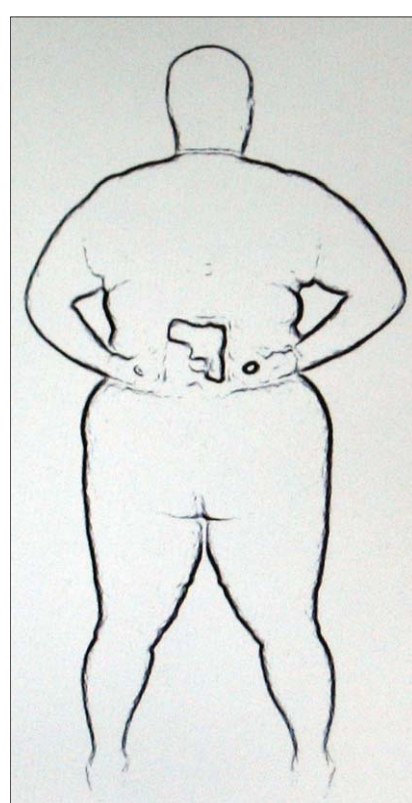

Targeted physical inspection (post access, not stationary, metrics)

Biometric access control (fingerprint, iris, limited access, record of access)

Certified employee (more rigorous, voluntary, interview)

Technology deployment (cameras, millimeter wave)

* These measures are in addition to several existing initiatives in place to address employee security, including; perpetual vetting of employees against watch lists, badge and keypad-protected entry points, and TSA employee screening patrols and surges.
